CRITICAL INFRASTRUCTURE TECHNOLOGIES PROVIDES NEXUS PRODUCTION UPDATE

Vancouver, BC – November 4, 2025 – Critical Infrastructure Technologies Ltd. (CSE: CTTT) (OTC: CITLF) (FRA: X9V) (“CiTech” or the “Company”), a leading developer of autonomous, high-capacity mobile communications and security platforms, is pleased to provide an update on the production and delivery schedule for its Nexus platform series, with multiple units entering final assembly and deployment phases in key international markets.

The production timeline is progressing as follows:

- Nexus 1 and 2 – scheduled to arrive at CiTech’s production facility mid-December 2025
- Nexus 3 – scheduled to arrive mid-February 2026
- Nexus 4 – to be delivered to Babcock International’s facility in Poland in mid-March 2026
- Nexus 5 – to be delivered to Virginia Beach, USA by the end of March 2026

Upon arrival, each Nexus unit will undergo a final fit-out process of approximately four weeks, integrating advanced communications, surveillance, and control systems.

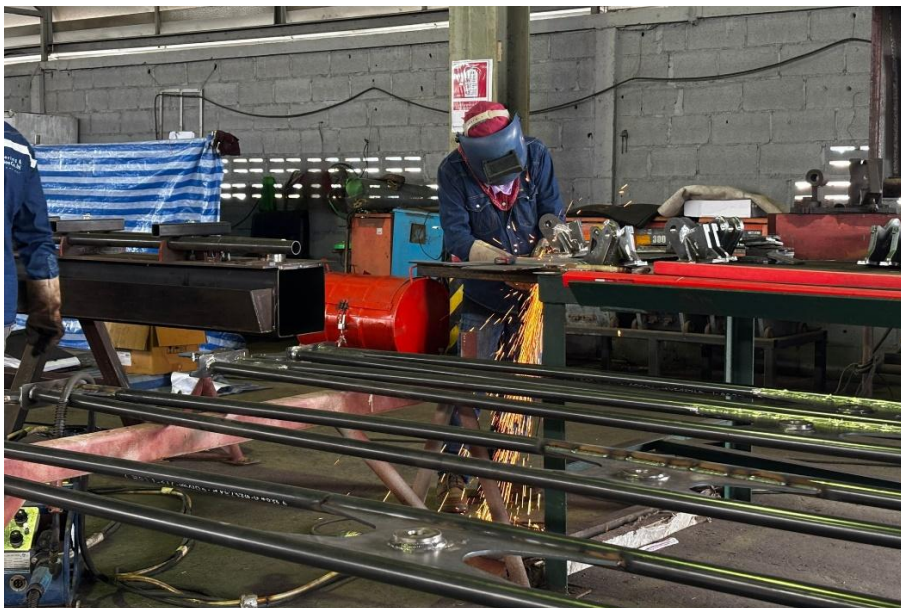

Following completion, demonstrations will be conducted in each respective region, including Europe, North America, and Australia, with strong commercial interest already evident across all markets. CiTech anticipates that each Nexus platform will be sold immediately following demonstration, netting a total of up to CAD\$4.5 million.

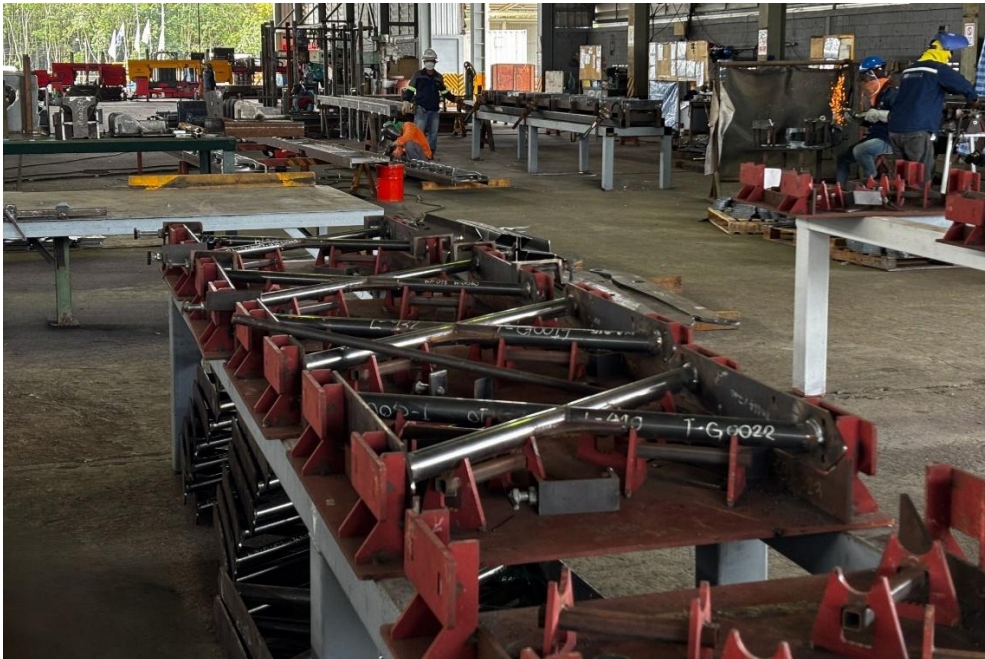

“The continued progress of the Nexus production program highlights the scalability of our platform and the global demand for rapidly deployable infrastructure solutions,” said Brenton Scott, CEO, CiTech. “With production ramping up and international deployment now underway, we are entering a pivotal phase in demonstrating the versatility and capability of the Nexus system.”

About Critical Infrastructure Technologies Ltd.

Listed on the CSE with operations in Perth, Western Australia, CiTech is creating autonomous, high capacity, rapidly deployable technology that delivers essential services to where they are needed most. CiTech is targeting the mining, defence, border security/surveillance and emergency services sectors in relation to its first product release, the Nexus 16 and the recently released Nexus 20/24, which aims to provide critical mobile telecommunications, together with integrated C-UAS, ISR and radio for such sectors. Using patented technologies, CiTech's self-deploying platform (SDP) provides a solution for two

of the greatest limitations of current rapidly deployable communication solutions, strength of the tower and ability to rapidly self-deploy and operate, in numerous situations. The SDP is designed to support radio equipment including LTE (Long Term Evolution) and several other technological payloads, such as surveillance and anti-drone systems. CiTech has completed the research and development phase and is currently commercialising the first of many products that will be released. To learn more about the Company, visit www.citech.com.au.
